Bio-resin

Early experiments with bio-resin

Face of bio-resin with LED, made in silicon madeleine mould

Rear of bio-resin, with LED made in silicon madeleine mould

Face of bio-resin and aluminium powder made in silicon madeleine mould

Rear face

Face of bio-resin and aluminium powder with non-woven flax reinforcement, made using pobble mould

Cocoa shell waste

Face of bio-resin with cocoa shell, made using pobble mould

Detail of face of bio-resin with cocoa shell, made using pobble mould

Bio-resin and jute coffee sack, made using pobbles mould

Waste jute sacking from imported coffee beans used as reinforcement material

Face of bio-resin with jute sacking reinforcement, made using pobble mould

Rear side of bio-resin and jute sacking, made using pobble mould

Face of bio-resin with jute coffee sack reinforcement showing plaster from mould, made using pobble mould

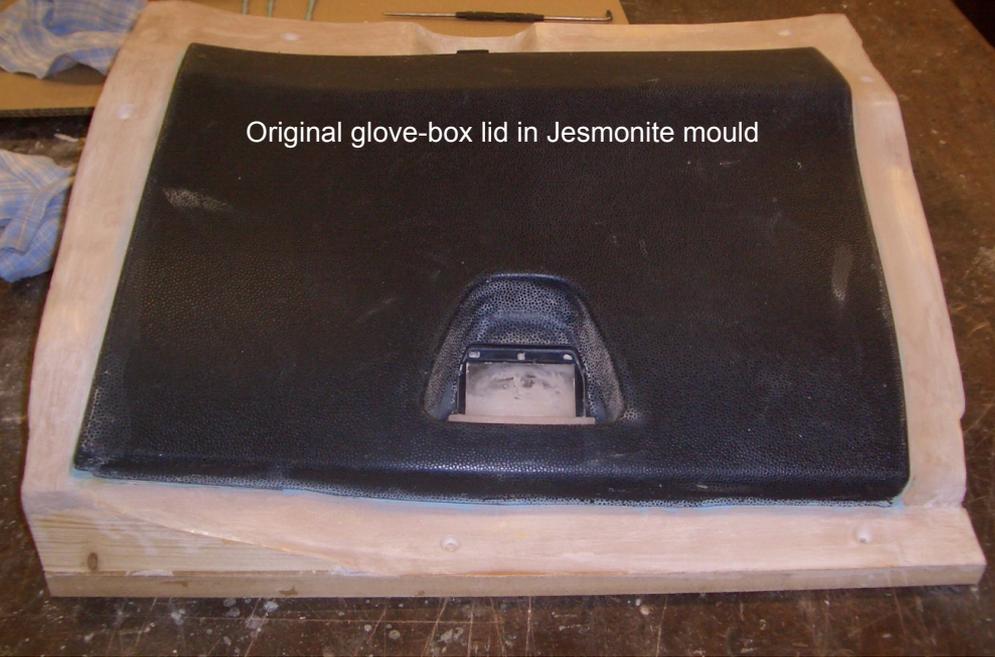

Rear face of bio-resin and jute coffee sack, made using pobble mould

Dyed jute fabric and bio-resin with aluminium powder, made using pobble mould

Glove-box lid

Original glove-box lid in Jesmonite mould

Laying up the mould with a gel-coat of bio-resin and jute coffee sack

Making the glove-box lid

Laid up mould

Detail of bio-resin glove-box lid

Glove-box lid made with bio-resin and aluminium powder, partly sanded in left corner

Glove-box lid made with bio-resin

Door panel

Silicon jacket for inner door panel

Making the inner door panel

Vacuum bagging the inner door panel

Vacuum bagging

Rear face after vacuum bagging

Peeling off the protective film

Broken part of outer door panel

Broken part of outer door panel

Detail showing flaws in the bio-resin surface in the broken part of outer door panel

Door panel: inner part bio-resin, Nextel painted outer part

Close up of bio-resin inner inner door panel part, and Nextel painted outer door panel part

Completed door

Biotex

A series of small scale formed parts for low weight panels, using renewable materials

Biotex twill weave structure, formed in pobbler mould

Biotex hopsack weave structure, formed in pobbler mould

First experiments with Biotex

Woven reflective and wool textile with Biotex, formed in pobble mould

Woven metal and polypropylene textile with Biotex, formed in pobble mould

Rear face

Biotex hopsack weave, dyed yellow and formed in pobble mould

Biotex twill weave, dyed black and formed in pobble mould

Rear face

Woven wool textile and Biotex, formed in pobble mould

Rear face

Repeat Deco design, wool/nettle woven textile with Biotex, formed in pobble mould

Repeat snow design, wool/nettle woven textile with Biotex, formed in pobble mould

Repeat Deco design, woven wool/nettle textile with Biotex, formed in pobble mould
